The global Tandem Master Cylinder market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The tandem master cylinder is a kind of brake master cylinder commonly used in modern automobile brake system. It consists of two separate hydraulic circuits, which work together to provide redundancy and improve safety in case of failure. The tandem master cylinder is usually located in the engine compartment, close to the brake booster or vacuum pump, and connected to the brake line of each wheel. The master cylinder is filled with brake fluid. The brake fluid is pressurized by the piston and delivered to the brake caliper or wheel cylinder. In the brake caliper or wheel cylinder, the brake pad or brake shoe is pressed on the brake disc or brake drum to slow down the vehicle.
