A Tank Floor Scanner is a device used to inspect the condition of the floor of a storage tank. It is typically used in industries as oil and gas, chemical, water treatment plants where large storage tanks are common. The scanner uses various technologies such as ultrasonic testing or magnetic flux leakage to detect and evaluate potential damage or corrosion on the tank's floor. It can provide accurate measurements of the thickness of the tank floor and identify any areas that require maintenance or repair. Tank floor scanners are designed to be non-destructive testing tools, meaning they can assess the condition of the tank without causing further damage. They are often attached to robotic systems for automated scanning, allowing for thorough and efficient inspections.
