Abstracts

Storage tank insulation material is a combination of one or more materials that adds a protective layer to the storage tank and reduces the heat loss or increase in heat generated by surfaces that work at temperatures above or below the ambient temperature. According to the material, the tank insulation material market has been subdivided into PU and PIR, rock wool, fiberglass, flexible foam, EPS honeycomb glass, etc. PUR and PIR foams are lightweight, moisture and fire resistant, have low thermal conductivity and density, and provide better structural performance. These characteristics make it useful in cold conditions.

According to our (Global Info Research) latest study, the global Tank Insulation Materials Based on PU and PIR market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.
