Abstracts

According to our (Global Info Research) latest study, the global Tank Testing Service market size was valued at US\$ 1037 million in 2025 and is forecast to a readjusted size of US\$ 1460 million by 2032 with a CAGR of 5.0% during review period.

Tank Testing Service refers to a professional technical service dedicated to evaluating the safety, reliability, and compliance of various storage tanks (including metal, FRP, concrete, and plastic tanks) used in industries such as petroleum, chemical engineering, food processing, water treatment, and energy storage. It involves systematic detection and verification of key performance indicators including structural integrity, sealing performance, pressure-bearing capacity, corrosion resistance, and weld quality through standardized methods (e.g., hydrostatic testing, pneumatic testing, ultrasonic testing, radiographic testing, leak detection, and corrosion thickness measurement).

The Tank Testing Service industry is trending toward intelligence, automation, and digitization with robotic inspection, drone-based non-destructive testing (NDT), and digital twin-enabled predictive maintenance becoming mainstream, while stricter global industrial safety and environmental regulations (e.g., API, ASME, ISO standards) and aging infrastructure drive sustained demand for regular inspections. Key opportunities lie in the booming needs of emerging sectors such as hydrogen energy storage, LNG tanks, and electrochemical energy storage facilities, rapid market expansion in Asia-Pacific and other emerging economies due to industrialization, and the rise of 'Inspection-as-a-Service' subscription models that enhance long-term cooperation with clients. However, the industry faces notable challenges: a severe shortage of skilled NDT technicians amid an aging workforce, high costs of advanced testing equipment and technology R&D that burden small and medium-sized service providers, fragmented regional regulatory requirements that increase cross-border compliance

complexity, and slow adoption of new digital technologies among some traditional enterprises, coupled with data silos that hinder the integration of inspection data with production systems.
