SCOPE OF THE REPORT:

This report studies the Tanker Shipping market status and outlook of Global and major regions, from angles of players, countries, product types and end industries; this report analyzes the top players in global market, and splits the Tanker Shipping market by product type and applications/end industries.

The growth in the global oil and gas logistics is estimated to be one of the major factors that will have a positive impact on the global tanker shipping market during the forecast period. Since 2014, the drop in the global crude oil prices have raised the demand for oil and gas during the forecast period. This rise in the global requirement for crude oil products will drive the global oil and gas logistics market. Moreover, the transportation of liquid hydrocarbons across the world is mainly done through waterways, and tankers are increasingly used for the transportation of liquid hydrocarbons, such as oil and gas, driving the tanker shipping market size.

The improvements in the propulsion system of tankers is one of the key trends that will gain traction in the tanker shipping market. The introduction of marine two-stroke diesel engines over the two stroke diesel engines for commercial purposes and the development of cross compound double reduction steam turbines with their compact size have been recognized as improvements in the shipping industry.
