Abstracts

The global Tannase market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

The industry trend for Tannase is marked by increased demand in the food and pharmaceutical sectors due to its applications in improving product quality and functionality. As consumer preferences shift towards natural and bioactive ingredients, there is growing interest in utilizing tannase for its role in extracting valuable compounds from plant sources. Research focuses on optimizing production methods, exploring new sources of tannase, and developing enzyme variants with enhanced properties, aligning with the broader trend of sustainable and bio-based solutions in various industrial processes.

Tannase is an enzyme that catalyzes the hydrolysis of tannins, complex organic compounds found in various plant tissues. This enzymatic activity breaks down tannins into smaller, less complex molecules, often used in industries such as food and beverages, pharmaceuticals, and leather processing. Tannase plays a crucial role in improving the quality and characteristics of products by reducing astringency in foods and aiding in the extraction of bioactive compounds from plant materials, contributing to enhanced flavor profiles and potential health benefits.
