The global Tannin Blockers market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Tannin blockers work by binding to tannins and forming complexes, preventing them from interacting with other compounds or causing unwanted reactions. They can be added to products or processes to mitigate the negative effects of tannins and improve the overall quality or performance. Tannin blockers are commonly used in industries such as food and beverages, winemaking, leather processing, wood preservation, and pharmaceuticals.

Tannin blockers are substances or compounds used to inhibit or reduce the effects of tannins.
