According to our (Global Info Research) latest study, the global Tannin market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Tannin is a natural water soluble polyphenolic compound present in several plants. It is found in different plant organs such as leaves, seeds, fruits, roots, bark, and stem. Tannin is abundant in bark of an oak tree and in berry fruits. Other tannin-rich food items include nuts, herbs & spices, and legumes. Tannin is also abundant in chocolates and black tea. It is a natural astringent. Tannin is extracted with water or alcoholic solvents. It is also called tannic acid. It appears as pale yellow to light brown amorphous compound. The molecular weight of tannin ranges from 500 to 3,000 Da. They can bind with proteins, and other several polymers.

Rise in demand for leather and wine is anticipated to drive the tannin market during the forecast period. Demand for tannin is increasing in leather processing due to the growth in demand for leather bags, footwear, and other goods. Tannin is used for clarification in wine and beer production. Furthermore, tannin is naturally present in skin, seed, and stem of grapes, from which wine is prepared. Increase in demand for leather in the automotive industry is expected to boost the tannin market in the next few years. Demand for tannin is rising in the medical sector owing to its astringent and other healthy properties.
