Tantalum powder is the powder of metal tantalum, which is a rare silver-gray metal with very high melting and boiling points, stable chemical properties, ductility, plasticity and processability.

Tantalum powder is an important metal powder with wide application prospects and market potential. Because tantalum powder has high melting point and stable chemical properties, and exhibits excellent performance in high temperatures and corrosive environments, it is widely used in electronic devices, aerospace, chemical industries and other fields. In addition, tantalum powder can also be used to manufacture electronic devices such as electronic capacitors, which have high electrical properties and reliability. Due to its good ductility and processability, tantalum powder can also be processed into various plates, rods, wires, etc., for manufacturing various parts and products.
