Abstracts

The global Tape for Dicing market size is expected to reach \$ 15700 million by 2029, rising at a market growth of 6.2% CAGR during the forecast period (2023-2029).

Tape for Dicing is a backing tape used during wafer dicing or some other microelectronic substrate separation, the cutting apart of pieces of semiconductor or other material following wafer or module microfabrication. The tape holds the pieces of the substrate, in case of a wafer called as die, together during the cutting process, mounting them to a thin metal frame. The dies/substrate pieces are removed from the dicing tape later on in the electronics manufacturing process.

This report studies the global Tape for Dicing production, demand, key manufacturers, and key regions.
