Abstracts

The global Tape Bundling Machine market size is expected to reach \$ 510 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

In 2025, global Tape Bundling Machine approximately 174 k units, with an average global market price of around US\$ 1842 per unit. Gross margin is about 48%. The cost is 958 usd. The Production is about 240 k units. Tape Bundling Machine is a packaging device used to wrap adhesive tape (typically OPP, PVC, or paper tape) around a group of products to secure them together for handling, storage, or transportation. Instead of fully enclosing items like shrink wrapping, the machine applies one or more tight tape bands around cartons, bottles, printed materials, or small packages, providing quick stabilization while allowing easy removal and minimal material usage. Upstream, it relies on motors, drive rollers, tension control mechanisms, sensors, PLC controllers, and adhesive tape materials. Midstream manufacturers integrate feeding, positioning, wrapping, and tensioning mechanisms into automated or semi-automatic equipment lines. Downstream, tape bundling machines are widely used in logistics warehouses, food and beverage packaging, e-commerce fulfillment centers, printing and publishing, and consumer goods packaging, where fast grouping and low-cost packaging are required.
