## Abstracts

According to our (Global Info Research) latest study, the global Taq Enzyme Antibody market size was valued at US\$ 144 million in 2024 and is forecast to a readjusted size of USD 200 million by 2031 with a CAGR of 4.9% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The product is a monoclonal antibody of Taq enzyme used in hot-start PCR technology. After binding to Taq enzyme, it inhibits DNA polymerase activity at low temperature, and can effectively inhibit non-specific annealing of primers and non-specific amplification caused by primer dimers under low temperature conditions. Hieff® anti-Taq DNA Polymerase Antibody denatures in the initial DNA denaturation step of the PCR reaction, and the DNA polymerase activity is restored to achieve the effect of hot-start PCR. This product does not require special antibody inactivation treatment and can be used under conventional PCR reaction conditions.
