## Abstracts

According to our (Global Info Research) latest study, the global Targeted Proteomics Service market size was valued at US\$ 1727 million in 2025 and is forecast to a readjusted size of US\$ 3554 million by 2032 with a CAGR of 11.0% during review period.

Based on mass spectrometry analysis technology, combined with prior bioinformatics analysis, the Targeted Proteomics Service utilizes techniques such as Multiple Reaction Monitoring (MRM) or Selected Reaction Monitoring (SRM) to accurately target specific peptides and ion signals for quantitative analysis. Unlike non-targeted proteomics, this approach selectively chooses ions for the collection of mass spectrometry data, enabling the analysis of numerous samples with enhanced accuracy, sensitivity, and reproducibility. Targeted proteomics is applicable to a range of studies including post-translational modifications, protein conformations, protein-protein interactions, dynamics, and the systemic investigation of metabolic and signaling pathways.
