A Taut Wire Position Reference System is a navigation system used in marine applications to determine the position of a vessel. It consists of a taut wire sensor that measures the tension in a wire connected to the vehicle, along with a series of sensors that measure the angle and speed of the vehicle. By analyzing the data from these sensors, the system can accurately determine the position of the vehicle in three-dimensional space. This information is crucial for navigation and control purposes, especially in situations where GPS signals may be unreliable or unavailable.
