The global TCT Heavy Ion Microporous Membrane market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

TCT heavy ion microporous membrane is a high-performance microporous membrane with high porosity and good filtration efficiency. It is made of polymer materials and has a highly regular microporous structure through special processing techniques. The pore diameter of TCT heavy ion microporous membrane is usually 0.1-10 μ m, which can be used to remove microorganisms, particles, cells and other substances. The unique feature of TCT heavy ion microporous filter membrane is that it has good radiation resistance and can maintain stable filtration performance under high dose heavy ion irradiation. Therefore, TCT heavy ion microporous membrane is widely used in space capsule, nuclear power plant, nuclear medicine and other fields, which can be used to filter and purify air, water, blood, etc. In addition to excellent irradiation performance, TCT heavy ion microporous filter membrane also has the following characteristics:

- efficient filtration: TCT heavy ion microporous filter membrane has a highly regular microporous structure, which can achieve efficient filtration and separation.
- Good mechanical strength: TCT heavy ion microporous filter membrane has good mechanical strength and wear resistance, and can be used in harsh environments.
- Good chemical stability: TCT heavy ion microporous filter membrane has good chemical stability and can withstand the erosion of acid, alkali and other chemicals.

In conclusion, TCT heavy ion microporous membrane is a high-performance microporous membrane with high filtration efficiency and irradiation stability, and is widely used in space, nuclear medicine, nuclear power plant and other fields.
