Abstracts

The global Teak Logs & Lumber market size is expected to reach \$ 4116 million by 2032, rising at a market growth of 8.9% CAGR during the forecast period (2026-2032).

Teak logs and lumber refer to roundwood and sawn boards derived from teak (*Tectona grandis*), a tropical hardwood prized for its high oil content, natural decay resistance, dimensional stability and distinctive golden-brown luster. Widely regarded as one of the world's most valuable hardwoods, teak is extensively used in yacht decking, outdoor furniture, interior decoration, architectural millwork and flooring. In the fact that teak represents one of the longest value chains and highest brand premiums among tropical hardwoods. Its supply and demand dynamics directly reflect the health of high-end consumer markets (yachts, luxury real estate) and serve as a key indicator for observing forestry policy changes and international trade barriers in major producing countries such as Indonesia and Myanmar.

Teak logs and lumber represent one of the longest value chains and highest brand premiums in tropical hardwood trade. The core value derives from teak's natural oil content, which provides exceptional decay resistance and dimensional stability, making it nearly irreplaceable in outdoor applications (yacht decking, garden furniture) and high-end interior finishing. Pricing is determined by origin, age and certification: Myanmar old-growth teak sits at the top due to depletion and sanctions; Indonesian plantation teak dominates mid-to-high volume markets with 90% of global production; African and South American plantation teak fills the low-to-mid tier with cost-effectiveness. On the supply side, Indonesia leads, Myanmar shrinks, and Africa/Latin America play supplementary roles. Demand is heavily tied to the European and US yacht industries, luxury landscaping, and outdoor furniture exports. Profit distribution is skewed: Indonesian state-owned forestry companies and large mills

capture most margins through resource control and scale; Myanmar channels have narrowed due to sanctions; Chinese import processors earn thin margins amid price transparency. Growth potential lies in the rigid demand for FSC-certified teak in the yacht sector, the steady expansion of outdoor living culture, and rising procurement of durable hardwoods in emerging markets, though facing competition from substitutes such as ipe and balau. Uncertainties include: whether Indonesia will further tighten log export bans, forcing global processing capacity to shift to sawn timber; whether Myanmar's PEFC certification can be restored to re-establish legal exports; and quality consistency and certification progress of African and South American plantation teak. Conclusion: Teak logs and lumber is a high-end hardwood market built on resource scarcity, brand recognition, and sustainability certification. Indonesia, with its plantation scale and processing integration, locks in global pricing power, while Myanmar natural teak maintains a super-premium niche. Over the next five years, supply will further concentrate in Indonesia, while African and South American capacity will slowly ramp up. High-end demand will increasingly favor certified material, and teak without FSC or SVLK certification will be gradually marginalised in Western markets.
