Abstracts

Teeth whitening products is products that can either restore natural teeth shade or whiten teeth beyond natural shade.

Teeth whitening products can be divided into two categories: surface whiteners and bleaches.

Surface whiteners help remove surface stains physically or chemically. Products in this category mainly include dental scalers, chewing gums, toothpastes, gels and whitening kits, rinses, paint-on films and strips.

Bleaches are generally based on peroxides and are able to change the inborn color of teeth.

Based on the different conditions of teeth, two different kinds of methods will be adopted accordingly. Vital bleaching is done on “living” teeth and can remove the color caused by food, tobacco or age. While for teeth which is no longer “alive” non-vital bleaching will be applied to alter the changed color caused by root canal.
