## Abstracts

The global Telecom Dark Fiber market size is expected to reach \$ 10768 million by 2032, rising at a market growth of 10.4% CAGR during the forecast period (2026-2032).

In 2025, global Telecom Dark Fiber service volume reached approximately 2.83 million fiber-km, with an average global market price of around US\$1,850 per fiber-km.

The gross profit margin of major companies in the industry is between 34% ? 56%.

In 2025, the global production capacity of Telecom Dark Fiber was approximately 3.77 million fiber-km.

Telecom Dark Fiber refers to installed but unused optical fiber capacity leased or activated for dedicated data transmission. It allows users to deploy their own transmission equipment over reserved fiber infrastructure, offering high bandwidth, low latency, scalability, and strong control for telecom carriers, hyperscale data centers, enterprises, and network operators.

The industrial chain of Telecom Dark Fiber includes upstream optical fiber, cables, ducts, connectors, network hardware, and construction services. Midstream covers route design, network deployment, fiber leasing, maintenance, and testing. Downstream applications mainly include telecom backbones, data centers, enterprises, cloud connectivity, financial networks, and high-capacity transmission services.

The global dark fiber market is growing rapidly driven by data center interconnection, 5G network deployment, cloud computing expansion, and enterprise dedicated line demand. Its advantages of large bandwidth, low latency, and physical security make it a

core resource for next-generation digital infrastructure.

This report studies the global Telecom Dark Fiber production, demand, key manufacturers, and key regions.
