Abstracts

The global Telecom Power System market size is expected to reach \$ 9412 million by 2032, rising at a market growth of 5.5% CAGR during the forecast period (2026-2032).

The communication power supply system is a power supply device that provides DC or AC electrical energy to the communication equipment, and it is an important component for the normal operation of any communication system. The quality of communication not only depends on the performance and quality of all kinds of communication equipment in the communication system, but also depends on the power supply quality of the communication power supply system. If the power supply quality of the communication power supply system fails to meet the requirements of the relevant technical indexes, it will cause telephone crosstalk, noise increase, communication quality decline, BER increase, resulting in communication delay or error. Once the communication power supply system failure, power supply interruption, communication will be interrupted, and even the whole communication bureau (station) paralyzed, resulting in serious losses. It can be said that the communication power supply is the "heart" of the communication system, which occupies an extremely important position in the communication network.

Market: China leads 5G construction, data center/edge computing becomes new growth point

Trend: GaN high efficiency, lithium popularization, AI intelligent management are the three main technology lines

Lithium iron phosphate (LFP) popularization: cycle life up to 5000 times (lead acid only 300 times)

China Mobile's 2024 bidding for lithium accounted for more than 70%.
