Teleprompter Software is a professional tool designed to display pre-written scripts or texts in a clear, adjustable manner, enabling users to deliver speeches, presentations, videos, or broadcasts smoothly without memorizing content. It features customizable text speed, font size, color, and background settings, supporting both single-screen and dual-screen display modes to adapt to different shooting and presentation scenarios. The software also typically includes functions such as script editing, pause control, and progress tracking, helping users maintain natural eye contact with the audience or camera, enhance expression fluency, and improve the overall quality of their delivery, widely used by hosts, speakers, content creators, and professionals in various fields.

With the rapid development of video content creation, live streaming, corporate presentations, and public speaking activities, the demand for efficient and user-friendly teleprompter tools continues to grow. Content creators, live streamers, corporate trainers, media hosts, and educators all need such software to reduce the burden of memorization, avoid forgetting lines, and maintain a natural and professional image during delivery. The popularity of mobile devices and desktop terminals has expanded the application scenarios of teleprompter software, as users increasingly seek portable, easy-to-operate solutions that can be used across multiple devices. Additionally, the demand for personalized functions such as script cloud synchronization, multi-device collaboration, and custom display effects further drives market growth, creating broad business opportunities for software providers that can offer diverse, compatible, and

cost-effective teleprompter solutions to meet the differentiated needs of different user groups.
