## Abstracts

Telescopic Linear Guides are made up of an outer rail and one or more inner rails. Designs with longer strokes (equal to the rail length or greater) typically incorporate an intermediate element, which improves stiffness and reduces deflection. Balls or cam rollers guide the movement and support the load. Cam roller versions can be supplied with wipers or seals that protect against contamination and provide lubrication to the slide. Steel balls provide higher load capacity and can be preloaded, but they're more sensitive to contamination.
