## Abstracts

The global Telescopic Power Pruner market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A telescopic power pruner is a gardening tool that combines a pruning saw with a long telescopic pole to allow you to reach and cut higher branches on trees without the need for a ladder or climbing equipment. The pole can extend and retract, allowing you to adjust the length of the tool to suit the height of the branch you need to prune. The pruning saw is powered by a small motor that runs on electricity or a rechargeable battery, which makes it easier to cut through thicker branches with less effort.
