According to our (Global Info Research) latest study, the global Tellurium Copper Alloy market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Tellurium copper alloy is a compound Cu_2Te formed by tellurium element and copper in the cast state. This compound forms a eutectic with copper at a higher temperature (about $1084^{\circ}C$), and is distributed in the copper matrix in the form of dispersed and soft second phase particles. Among them, the grain refinement can significantly improve the cutting performance of the alloy, and at the same time, the influence on the electrical conductivity is relatively small. Due to the joint effect of dispersion strengthening and grain refinement strengthening, it has an organic combination of excellent thermal conductivity, ductility, strength and other properties, and good cutting performance. In view of its good comprehensive performance, it is used in the fields of electronic information, electrical appliances, transportation and other materials.
