Temperature controlling fibers are advanced textiles designed to regulate and maintain a stable temperature for the wearer, providing comfort in varying environmental conditions. These fibers incorporate materials or technologies that can absorb, store, and release heat as needed. For example, phase change materials (PCMs) embedded in the fibers can absorb excess body heat when the temperature rises and release it when the temperature drops, thereby maintaining a balanced thermal environment. These fibers are used in various applications, including clothing, bedding, and industrial textiles, to enhance thermal comfort and energy efficiency. Temperature controlling fibers are particularly valuable in outdoor gear, sportswear, and protective clothing, where maintaining an optimal body temperature is crucial for performance and safety.
