The temperature humidity vibration combined test system is a test system that integrates a test chamber capable of generating temperature and humidity environmental conditions with vibration test equipment capable of producing vibration environmental conditions. This system combines three types of test environments (temperature, humidity, and vibration) within a single test chamber, allowing for the simultaneous or sequential application of these three environmental stresses—temperature, humidity, and vibration—according to a set program. It simulates the complex and comprehensive environments that a product may encounter during actual use, in order to verify the product's reliability, durability, and performance stability.
