A temperature limit fuse, also known simply as a thermal fuse or thermal cutoff, is a safety device used to prevent overheating in various electrical appliances and devices. It's designed to interrupt electrical flow when the temperature exceeds a certain threshold, thus preventing potential fire hazards or damage to the appliance.

The fuse contains a heat-sensitive component, usually a small pellet or piece of alloy, which melts or breaks a circuit when the temperature rises above its rated limit. This action breaks the electrical connection and shuts down the appliance until the fuse is replaced.

Temperature limit fuses are commonly found in appliances like hair dryers, coffee makers, toasters, and other heating devices where overheating poses a risk. They provide an additional layer of protection beyond traditional circuit breakers or fuses by responding specifically to temperature fluctuations.

This report is a detailed and comprehensive analysis for global Temperature Limit Fuse market. Both quantitative and qualitative analyses are presented by manufacturers, by
