## Abstracts

According to our (Global Info Research) latest study, the global Temporary Abutments for Dental Implant market size was valued at US\$ 438 million in 2025 and is forecast to a readjusted size of US\$ 594 million by 2032 with a CAGR of 4.2% during review period.

In 2025, global Temporary Abutments for Dental Implant production reached approximately 8,500 k units with an average global market price of around US\$ 50 per unit, and a gross profit margin of approximately 10%-30%. Temporary abutments for dental implants are short- to medium-term prosthetic components used between implant placement and delivery of the final restoration. They are screwed onto the implant fixture (or multi-unit abutment) to support provisional crowns, bridges or full-arch prostheses during osseointegration and soft-tissue maturation. In contrast to simple healing abutments, which mainly maintain access to the implant, temporary abutments are designed to carry functional and esthetic provisional restorations while shaping the emergence profile and preserving papillae.

In the upstream segment, key inputs include medical-grade titanium alloys (e.g., Ti-6Al-4V ELI) and high-performance polymers such as PEEK for plastic or hybrid temporary abutments, along with stainless-steel screws, precision CNC lathes and mills, cutting tools, polishing and surface-treatment chemicals, and metrology systems capable of holding tight tolerances at the implant-abutment interface. CAD/CAM software, scanning libraries and standards for mechanical/biocompatibility testing also sit upstream, defining connection geometries and performance targets. In the midstream, dental implant companies and specialized prosthetic-component manufacturers design and produce temporary abutments as part of complete implant

systems or multi-brand compatible portfolios. This includes CAD modeling of engaging and non-engaging designs, different collar heights and angulations, CNC machining or injection molding of titanium/PEEK components, surface finishing of transmucosal areas, laser marking, assembly with screws, and quality management under ISO 13485 with CE/FDA registration. In the downstream, products are distributed via implant manufacturers? direct sales forces, national distributors and online platforms to private implant clinics, group practices, hospital oral surgery departments and dental laboratories. Clinicians use temporary abutments to support provisional crowns, bridges and full-arch prostheses during healing and immediate-load protocols, while labs rely on them to fabricate and adjust provisional restorations.
