The global Temporary Teeth Adhesives market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Temporary dental cement is an adhesive used to temporarily restore teeth, usually when teeth are missing due to reasons such as cracked, missing or damaged teeth. It generally consists of some basic ingredients such as polyvinyl alcohol, phenolic resin, etc., and is usually a pasty substance. It is characterized by easy use and fast hardening, with certain adhesion and durability, which can protect the teeth while restoring them, and prevent bacteria from entering the inside of the teeth. Temporary dental adhesives are generally not a permanent restoration solution and are usually used for between a few days and a few weeks.
