The global Terlipressin for Injection market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Terlipressin for injection is a synthetic polypeptide that is an analog of the hormone secreted by the posterior pituitary gland. After injection, its triglycyl group will be cleaved by enzymes in the body to slowly release active substances such as vasopressin, which can contract smooth muscles and last for 10 hours. Vasopressin mainly has two effects: one is the obvious vasoconstriction effect, thereby reducing the venous blood flow to the hepatic portal system, thereby lowering the portal blood pressure and having a hemostatic effect; Body, prevent excessive loss of water in urine, has anti-enuresis function. Terlipressin for injection lowers HVPBG faster, stronger, and longer, and it is a drug for the treatment of complications of portal hypertension.
