Abstracts

The global Terminal Type Combined Transformer market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Factors such as high product technical requirements, large capital requirements, and strict qualification review requirements for terminal-type combined transformers have created high industry barriers for new entrants. However, small and medium-sized enterprises do not have the qualifications due to their small market share and brand influence. Market competitiveness and lack of ability to withstand market risks. Therefore, with the tightening of environmental protection policies, it is becoming increasingly difficult for small and medium-sized enterprises to survive. For large enterprises in the industry, due to their scale advantages and stronger technical strength, they have strong resistance to changes such as tightening environmental protection policies and rising raw material prices. Competitors generally use the customer bidding system to engage in open competition, using factors such as product quality, price level, technical strength and brand influence as measurement criteria. However, due to low industry concentration, they have always faced low-price competition.

Terminal type combined transformer (commonly known as American box transformer) is a transformer that combines the transformer body, switching equipment, fuses, tap changers and related auxiliary equipment. The high-voltage wiring scheme has terminal type and ring network type, which can adapt to Requirements for various power supply systems. It also has the advantages of compact structure, small size, space saving, low investment, and quick installation.
