Abstracts

The global Terminology Management Software market size is expected to reach \$ 1025 million by 2032, rising at a market growth of 4.9% CAGR during the forecast period (2026-2032).

Terminology management software assists in creating, organizing, and managing terminologies, glossaries, or dictionaries used in various fields or industries, ensuring consistency and accuracy in language usage and communication.

The Terminology Management Software market is driven by the rapid globalization of business operations and the growing need for consistent, accurate, and scalable multilingual communication across industries such as IT, healthcare, manufacturing, legal, and e-commerce. As organizations expand into international markets, managing large volumes of technical and brand-specific terminology becomes critical to ensure translation quality, regulatory compliance, and brand consistency. The rise of AI-driven translation, localization platforms, and content automation workflows is further accelerating demand for centralized terminology databases that integrate with translation management systems (TMS), content management systems (CMS), and authoring tools. In addition, increasing complexity in technical documentation, product localization, and regulatory requirements—particularly in highly regulated sectors—drives adoption of software that standardizes language usage and reduces translation errors. The shift toward cloud-based collaboration, remote teams, and real-time content delivery further reinforces the need for scalable terminology management solutions that improve efficiency, reduce costs, and enhance global content governance.
