According to our (Global Info Research) latest study, the global Termite Control System market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Termite Control Systems involve specialised chemical or physical products designed to prevent termites from accessing buildings from underneath or via concealed routes. Their aim is to force termites out into the open where they can be seen and pathways more easily identified.

North America accounted for the largest share in 2017; followed by Asia Pacific, owing to the growing adoption of termite control systems in countries such as the US, Canada, Australia, and China. Subterranean termites are widespread in North America and responsible for 90% of the management and damage costs in the US. In addition, the use of termite control systems is high in the residential sector due to the presence of a large number of wooden houses, consumer awareness, and the strong presence & consumer reach of service providers in this region. Thus, the North American region dominated the termite control systems market in 2017.

The Global Info Research report includes an overview of the development of the Termite Control System industry chain, the market status of Commercial & Industrial (In-ground Termite Control System, Above-ground Termite Control System), Residential (In-ground Termite Control System, Above-ground Termite Control System), and key enterprises in developed and developing market, and analysed the cutting-edge technology, patent, hot applications and market trends of Termite Control System.
