Abstracts

The global Termite Monitor market size is expected to reach \$ 270 million by 2032, rising at a market growth of 6.9% CAGR during the forecast period (2026-2032).

A termite monitor is a pest surveillance device designed to detect termite activity within buildings, soil, and wooden structures; it facilitates the early identification and continuous tracking of termites through technologies such as sensors, bait stations, acoustic detection, and humidity monitoring. This equipment is widely utilized across residential, commercial, and industrial building management sectors to prevent structural damage caused by termites. Through early warning systems and continuous surveillance, these devices effectively reduce maintenance costs, enhance building safety, and support the implementation of integrated pest management strategies. The termite monitor industry value chain encompasses an upstream segment comprising core components such as humidity sensors, acoustic sensors, microcontrollers, plastic housing materials, bait station components, and low-power communication modules. The midstream segment involves device manufacturing and integration, wherein sensing units, data transmission systems, signal processing modules, and alarm systems are assembled into complete monitoring units. Downstream applications span residential property management, commercial real estate, agricultural land conservation, infrastructure maintenance, and professional pest control services. Ancillary services—including installation and inspection, equipment maintenance, data analysis, and pest control consulting—are provided to ensure continuous monitoring accuracy and effective termite control outcomes. In 2025, the global production volume of termite monitors is projected to reach approximately 393,000 units, with a global average market price of approximately \$420 per unit. The gross profit margins for major enterprises within this industry typically range between 35% and 55%. Also in 2025, the global production capacity for termite monitors is estimated at approximately 524,000

units.
