Abstracts

According to our (Global Info Research) latest study, the global Ternary Copolymer Polypropylene (TCPP) market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

Terpolymer polypropylene, also known as polypropylene terpolymer, abbreviated as TCPP. It is made from propylene monomer and two other monomers such as butene/butadiene, ethylene/butene, etc., copolymerized under the action of a catalyst. The physical and chemical properties of the product are stable and the overall performance is improved. The three monomers of ternary copolymer polypropylene are formulated according to proportions. The finished product has the advantages of high transparency, high stiffness, good ductility, tear resistance, impact resistance, high temperature resistance, acid and alkali resistance, oxidation resistance, and electrical insulation. Therefore, ternary copolymer polypropylene can be widely used in manufacturing fields such as packaging, building materials, cables, and electronic devices.
