Abstracts

According to our (Global Info Research) latest study, the global Tetanus Vaccine (Adsorbed) market size was valued at US\$ 5659 million in 2025 and is forecast to a readjusted size of US\$ 6998 million by 2032 with a CAGR of 3.3% during review period.

In 2025, global Tetanus Vaccine (Adsorbed) production reached approximately 250 million units, with an average global market price of around US\$22 per unit. Tetanus Vaccine (Adsorbed) is a preparation of Tetanus formol toxoid adsorbed on aluminium phosphate gel. Thiomersal is used as a preservative. The potency is not less than 40 International Units per single human dose.

The global market for adsorbed tetanus vaccine maintains steady growth, driven by the rigid demand for post-traumatic prevention and continuous improvement of national immunization programs. The neonatal tetanus elimination goal promoted by the World Health Organization has significantly increased vaccination rates in low-income countries, and centralized procurement by international organizations provides stable support for these markets. Combination vaccines dominate the pediatric basic immunization market, while monovalent vaccines play an irreplaceable role in adult booster immunization and post-traumatic emergency prevention. Vaccine production technology is upgrading, with high-purity antigen preparation processes and new adjuvants improving immunogenicity and safety, and the proportion of pre-filled syringe formulations gradually increasing. Market development varies across regions, with growth in high-income countries mainly coming from increased adult immunization coverage, while low- and middle-income countries rely on further improvement of basic immunization rates. Global regulators continue to tighten vaccine quality and production standards, raising industry entry barriers. Future market growth will be driven by the

release of adult booster immunization demand and iterative upgrades of combination vaccine products.
