According to our (Global Info Research) latest study, the global Tetrabromophthalate Diol (PHT4-Diol) market size was valued at US\$ 234 million in 2025 and is forecast to a readjusted size of US\$ 327 million by 2032 with a CAGR of 4.9% during review period.

Tetrabromophthalate diol is a brominated aromatic diol compound, typically synthesized by the reaction of tetrabromophthalic anhydride with a diol. It exhibits high flame retardancy and good thermal stability, and is widely used in flame-retardant polyesters, epoxy resins, composites, and high-performance electronic materials. The molecule contains four bromine atoms, which provide a hydrogen bromide release mechanism that effectively inhibits flame propagation during combustion, enhancing the material's flame-retardant performance. In addition, tetrabromophthalate diol has excellent chemical stability and processability, and is compatible with various resin systems, making it suitable for preparing composites and coatings with high-temperature resistance, arc resistance, or stringent flame-retardant requirements. Its applications extend beyond electronics and electrical equipment to aerospace and transportation, where high flame-retardant performance is critical. Overall, tetrabromophthalate diol is a functional and processable flame-retardant intermediate that provides reliable safety and performance for high-performance materials. In 2025, the global market average selling price is approximately USD 6,500 per ton, with global sales around 35,000 tons, and enterprise gross margin of about 20%.

In the future, the market for tetrabromophthalate diol is expected to maintain steady growth, driven primarily by strengthened global fire safety regulations and the widespread application of flame-retardant materials in electronics, electrical equipment, aerospace, automotive, and construction sectors. With advances in resin and composite

technologies, its compatibility and functionality with various resin systems will be further enhanced, enabling the production of lighter, more durable, and environmentally compliant high-performance flame-retardant materials. At the same time, environmental regulations restricting halogenated compounds will prompt manufacturers to optimize processes, improve efficiency, and explore alternative formulations with lower environmental impact while maintaining flame-retardant performance. Market competition is expected to favor large-scale producers with technological advantages, whereas small and medium-sized enterprises may face challenges from cost pressures and regulatory compliance. Regionally, Asia is projected to maintain the largest market share due to the rapid growth of electronics and automotive manufacturing, while North America and Europe will focus more on high-end specialty applications and regulatory compliance. Overall, tetrabromophthalate diol will continue to serve as a key flame-retardant intermediate supporting the development of high-performance materials, while evolving toward environmentally friendly and sustainable production, with steady market demand and enterprise gross margins expected to remain stable.
