## Abstracts

According to our (Global Info Research) latest study, the global Tetrabutyltin market size was valued at US\$ 10.27 million in 2025 and is forecast to a readjusted size of US\$ 13.39 million by 2032 with a CAGR of 3.9% during review period.

Tetrabutyltin is a colorless organotin compound with a characteristic odor. It is an oily liquid at room temperature, insoluble in water but soluble in many organic solvents. Raw materials include tin tetrachloride and n-butane chloride (or n-butyl chloride). Magnesium is typically used as a reactant, and the synthesis is achieved via the Grignard process or a modified Grignard process. Tetrabutyltin is an important chemical intermediate, primarily used in the manufacture of organotin heat stabilizers, catalysts, and as an antiknock agent for gasoline. Global sales in 2024 were approximately 4,000 tons, with an average market price of approximately US\$2,400 per ton. Industry gross profit margins range from 15% to 30%.

Tetrabutyltin is an important organotin compound. In industrial applications, it is mainly used as a heat stabilizer in the production of polyvinyl chloride (PVC), effectively preventing thermal degradation during processing. Modern production processes mostly employ the Grignard reagent method, reacting tin chloride with butylmagnesium bromide in diethyl ether. Overall, tetrabutyltin production capacity is still relatively low. Yunnan Tin, relying on the tin resource advantages of its parent company, has a strong guarantee in terms of raw material supply. However, with increasingly stringent environmental regulations, the use of tetrabutyltin is facing significant challenges. The

EU REACH regulation has listed it as a Substance of Very High Concern (SVHC), requiring users to conduct alternative assessments.
