According to our (Global Info Research) latest study, the global Tetraglycidyl 4,4'-diaminodiphenylmethane market size was valued at US\$ 508 million in 2025 and is forecast to a readjusted size of US\$ 835 million by 2032 with a CAGR of 7.3% during review period.

Tetraglycidyl 4,4'-diaminodiphenylmethane (commonly abbreviated as TGDDM) is a high-performance multifunctional epoxy resin produced by reacting 4,4'-diaminodiphenylmethane (DDM) with epichlorohydrin, resulting in a tetrafunctional glycidyl amine structure that offers high crosslink density, excellent thermal stability, and superior mechanical strength, making it widely used in aerospace composites, electronics encapsulation, and advanced adhesives. Its supply chain starts with upstream petrochemical feedstocks such as benzene (for aniline production) and propylene (for epichlorohydrin), followed by the synthesis of DDM and epichlorohydrin intermediates; midstream chemical manufacturers then carry out glycidylation and purification processes to produce TGDDM resin, often supplying it in liquid or semi-solid form; downstream, formulators and composite manufacturers blend TGDDM with curing agents (e.g., amines or anhydrides), fillers, and additives to produce high-performance epoxy systems used by end industries including aerospace, automotive, electrical & electronics, and wind energy. In 2025, global Tetraglycidyl 4,4'-diaminodiphenylmethane output was about 90,000 tons with 120,000 tons of capacity, average prices of USD 5,000-9,000 per ton, and gross margins around 29%.
