Temperature Rise Doors are specially designed doors whose primary purpose is to provide passive fire protection in the event of a fire. Made from high-temperature resistant materials, these doors are designed to prevent flames, smoke and hot gases from spreading to different areas of the building during fire conditions, thereby providing a window of time for evacuation and safety.

Temperature Rise Doors are usually installed in isolated areas, escape routes, elevator rooms and ventilation ducts inside buildings to reduce the threat of fire to people and property.
