Abstracts

The global Tetrapropyl Orthosilicate market size is expected to reach \$ 186 million by 2032, rising at a market growth of 4.7% CAGR during the forecast period (2026-2032).

Tetrapropyl Orthosilicate is an organic silicon ester compound belonging to the orthosilicate series. Its molecular structure consists of Si and four propoxy groups, and it has good hydrolysis and condensation activity. It can be converted into silica network structure in the sol gel reaction, so it is widely used as the precursor of silicon source and applied in the fields of aerogel materials, inorganic coatings, adhesives, optical and electronic materials. In 2025, global Tetrapropyl Orthosilicate production reached approximately 30.12 K MT, with an average global market price of around US\$ 4,327 per MT.

The annual production capacity of tetrapropyl orthosilicate is 50K MT, with a gross profit margin of about 20%.

Upstream: Organic silicon basic raw materials (such as silicon source intermediates), propanol (n-propanol or isopropanol), catalysts, and solvents.

Downstream: paints, coatings, silicone rubber, adhesives&sealants, etc.

Raw material costs account for 60% -70%; Manufacturing cost accounts for 10% -15%; Labor and management costs account for 5% -10%; Energy consumption and environmental protection costs account for 5% -10%; Sales and transportation costs account for 5%.
