According to our (Global Info Research) latest study, the global Textile Braid Hoses market size was valued at US$ 651 million in 2025 and is forecast to a readjusted size of US$ 912 million by 2032 with a CAGR of 5.0% during review period.

A textile braided hose is one of the types of hydraulic hose that is made up of several layers of fabric or yarn. The inner layer of the hose is typically made from a synthetic rubber material, while the reinforcement layer is made from a woven textile material. The layers are then bound together using a special adhesive or vulcanization process. The result is a hose that is strong, flexible, and durable. Compared with the wire-reinforced hose, textile braiding reinforced hydraulic hoses are designed to be used for medium to low-pressure working conditions for hydraulic hose applications.
