## Abstracts

The global Textile Chelating Chemicals market size is expected to reach \$ 887.7 million by 2029, rising at a market growth of 8.1% CAGR during the forecast period (2023-2029).

As environmental protection and sustainability become the focus of global attention, the development of Textile Chelating Chemicals will also develop in the direction of environmental protection and sustainability. For example, biodegradable chelating agents will receive increasing attention. These chelating agents can satisfy the chelating function while also having a smaller impact on the environment.

Textile Chelating Chemicals are catalysts that can combine with metal ions to form stable chelates, thereby preventing metal ions from reacting to oxidants, reducing agents, water, carbon dioxide, etc. Textile Chelating Chemicals refers to chelating agents used in the textile industry. It can combine with metal ions to prevent metal ions from damaging textile fibers and equipment, and improve the quality and durability of textiles.
