Textile Desizing Enzyme is a biological preparation made of amylase produced by microbial fermentation technology and other active ingredients. It is specially used in the desizing process of the textile printing and dyeing industry. It is efficient, environmentally friendly and mild. It is suitable for the desizing process of natural fibers (such as cotton and silk) and synthetic fibers (such as polyester) that are not resistant to high temperatures. Its core ingredient is α -amylase, which hydrolyzes the α -1,4 glycosidic bonds in starch molecules and decomposes macromolecular starch into soluble dextrans and oligosaccharides, so that the starch sizing on the fabric can be easily removed in subsequent washing.
