## Abstracts

According to our latest research, the global Textile Dye Wastewater Treatment System market size will reach USD 1806 million in 2031, growing at a CAGR of 6.0% over the analysis period.

It's important for textile factories to have an effective wastewater effluent treatment plan. Textile production processes are water-intensive and release harmful chemicals, dyes, acids and starches into the water. Textile effluent can cause significant water pollution that threatens human health and damages the environment. The textile industry uses many industrial processes and substances that require physio-chemical treatment of the water used in those processes. Since textile wastewater is so harmful, textile plants must have an appropriate effluent treatment system to treat water effectively while saving time, space and money.
