The global Textile and Clothing Recycling Services market size is expected to reach \$ 40902 million by 2032, rising at a market growth of 4.1% CAGR during the forecast period (2026-2032).

Textile and clothing recycling services refer to a series of services that collect, sort, clean, repair, reuse, or recycle old, outdated, or unused clothing and textiles. Its core purpose is to reduce clothing waste, promote resource reuse, and reduce the environmental burden through environmentally friendly and resource-saving methods. Recycled clothing and textiles can be donated, refurbished, reprocessed, or recycled into other products such as recycled fibers and carpets. Furthermore, with the popularization of the circular economy concept, this service not only contributes to environmental protection but also promotes sustainable development.

With increasing environmental awareness and the growing demand for sustainable development, textile and clothing recycling services are developing rapidly. The global production and consumption of textiles and clothing is enormous, generating waste that puts significant pressure on the environment. Recycling services not only effectively reduce waste accumulation but also provide consumers with environmentally friendly shopping options. In the future, with government policy support and corporate green transformation, the textile and clothing recycling market is expected to expand further, especially in its application in the circular economy and resource reuse sectors, becoming an important part of the global green development trend. The market size is expected to continue to grow.
