Textile pretreatment auxiliaries are a type of chemical auxiliaries used to improve the performance of fibers or fabrics before dyeing, printing or functional finishing during the dyeing and finishing of textiles. They are mainly used to remove natural impurities (such as pectin, wax, grease), artificial additives (such as sizing, oil) and pollutants in fibers or fabrics, thereby improving the hydrophilicity, whiteness and uniformity of the fabric, and providing an ideal substrate for subsequent dyeing, printing or functional finishing. The pretreatment process usually includes steps such as desizing, refining, bleaching and mercerizing. The choice of auxiliaries directly affects the treatment effect and production efficiency.
