## Abstracts

Textile Printing Auxiliary use the film forming effect of adhesive which attach insoluble dyes to fabric firmly to color the fabric. Printing auxiliaries include textile chemical thickener, binding agent, crosslinking agent, emulsifier, fixing agent, dispersing agent, silicone softener, defoamers and so on.

Adhesive is the main component of pigment printing paste. It is a kind of polymer film-forming substance, which adheres the paint to the fabric through film formation. Therefore, the adhesive is required to have trained adhesion to the fabric, reproducibility, and aging resistance. , Solvent resistance, acid and alkali resistance, chemical resistance, the film is clear and transparent, does not change color after printing, does not damage the fiber, has certain flexibility, good hand feeling, and is easy to remove from the printing machine.

Thickener is another important component of pigment printing paste. It has the functions of thickening color dyeing, promoting adhesion and emulsification, etc. The use right printed fabric can obtain uniform, soft and clear patterns. Not only can the color quantity and vividness be improved, but kerosene is not used or used less in the printing paste. There are two types of synthetic thickeners: anionic and non-ionic. The former is highly adaptable and can be used for dye-proof and discharge printing, but the thickening effect is poor; the latter has a high viscosity and thickening effect, which is good for printed fabrics. There is no adverse effect on the brightness of the shade, the washing fastness and the softness of the touch.

The main function of the cross-linking agent is to improve the fixing ability of the adhesive. The printing has better fastness, and can also reduce the curing temperature,

combined with the actual short curing time, but the amount should be appropriate, otherwise it will cause the fabric to feel bad. .

The emulsifier is added in order to obtain a good emulsifying thickener. Generally, an alkylphenol polyoxyethylene ether with a blocked end group is used, and the end group is blocked with an isocyanate. Pigment printing auxiliaries also include softeners, diffusing agents and defoamers.
