Abstracts

The main factors driving the market include growing demand for technical textiles and functional home textile finishing agents. However, strict environmental regulations regarding the treatment of textile finishing wastewater have become a major limitation of the market. Softening finishes are the fastest growing finishes in the world. The softener forms a coating on the fibers, thereby reducing friction between the fibers and at the same time enhancing abrasion resistance. In addition, due to the increased mobility, the fibers lose stiffness and absorb and eliminate mechanical stresses in a better way, which reduces tear strength and pilling tendency. These factors have increased the use of softening finishing agents in apparel textiles and home textiles, thereby completely promoting the growth of textile finishing chemicals.

According to our (Global Info Research) latest study, the global Textile Softening Agent market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.
