The textile wide-width raising machine is a device specially used for textile surface treatment. It is mainly used to raise the fiber needles on the fabric surface to form a fluff layer, thereby improving the feel and appearance of the fabric. The device uses a high-speed rotating brush head, needle plate or other mechanical device to rub or stretch the fabric surface to achieve the wide-width raising machine. It is usually used for large-format fabrics and is widely used in the processing of textiles such as blankets, flannel, and leather substitutes. It can not only improve the softness and comfort of the fabric, but also enhance the warmth retention and visual effect of the fabric, and is suitable for the finishing process of a variety of fabrics.
