Textiles Fire Retardant Treatment refers to a series of processes and techniques used to make textile materials less prone to catching fire and to slow down the spread of fire in the event of a fire, thereby enhancing the fire safety of textiles. This treatment is crucial for enhancing the fire safety of various products and environments. In the event of a fire, fire retardant treated materials can delay the spread of flames, giving people more time to evacuate and firefighters more time to carry out rescue and fire fighting operations.
